

# SafeBreach Exposure Validation Platform

## End-to-End Exposure Validation for Increased Organizational Resiliency

Enterprise security teams need the ability to continuously assess their organizational security posture against today's changing threat landscape. To achieve this, teams often invest in a plethora of security tools that increase deployment complexity, tool fatigue, alert overload, and operational costs. These challenges can create vulnerabilities and other exposures that attackers can exploit to breach an organization.

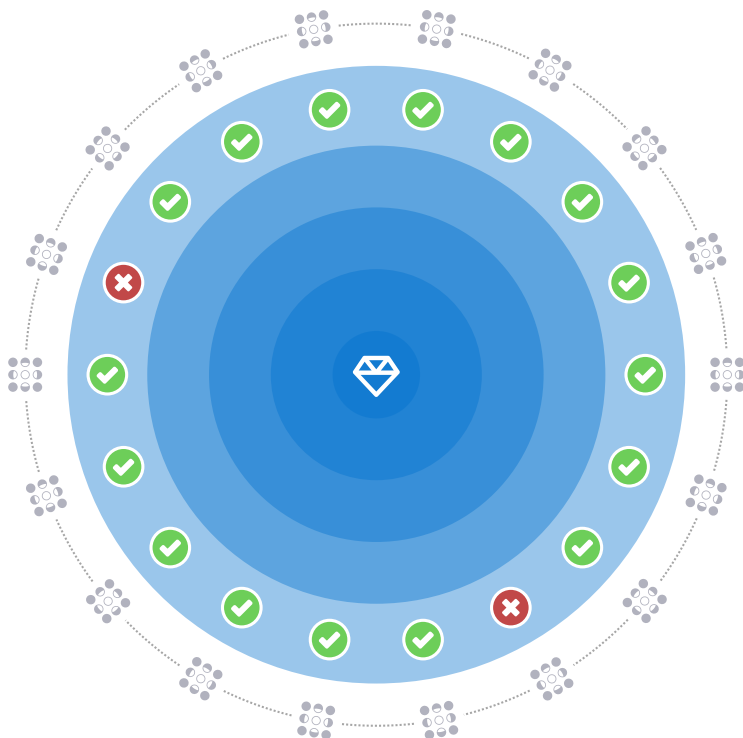

To combat these and other challenges, the SafeBreach platform offers a suite of exposure validation tools that provide end-to-end visibility into both the effectiveness of perimeter security controls and the potential impact of a successful breach, allowing security teams and leaders to gain a more holistic view of cyber risk and make informed remediation decisions.

---

## A Powerful Combination of Exposure Validation Capabilities

The SafeBreach exposure validation platform combines our pioneering and award-winning breach and attack simulation (BAS) product, SafeBreach Validate, with the attack path validation capabilities of SafeBreach Propagate. Together, these complementary tools not only help security teams identify security control gaps, but also understand what an attacker could accomplish by exploiting them for a more comprehensive understanding of risk.

---

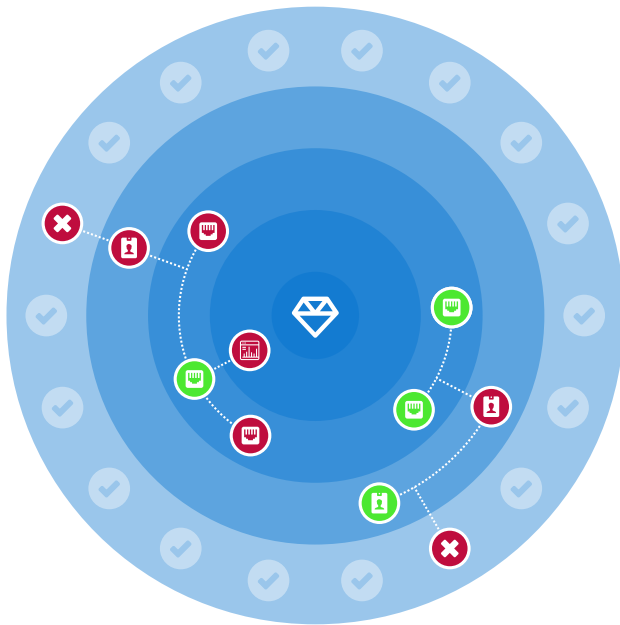

## SafeBreach Validate

Our award-winning BAS product that uses patented and trusted enterprise-grade technology to test the efficacy of deployed security controls against real-world threats. Leveraging the tactics, techniques, and procedures (TTPs) used by malicious actors, Validate automates adversarial attacks across the entire kill chain to help:

- Quickly and accurately identify vulnerabilities and control misconfigurations
- Simplify and streamline remediation across different teams and stakeholders
- Validate custom detections and incident response processes at scale
- Uncover actionable insights to accelerate remediation and support data-driven decisions
- Measure baseline risk, tracking improvement over time, and aligning security with business outcomes

### KEY USE CASES

- Security control validation
- Threat assessment and detection engineering
- Security posture and resilience reporting

---

## SafeBreach Propagate

Our automated attack-path validation product that is designed to assess the potential impact and blast radius of a successful breach. Whether alone or in concert with SafeBreach Validate, Propagate is designed to help:

- Uncover high-risk paths to critical organizational assets and crown jewels
- Identify security gaps and strengths among and between network endpoints
- Prioritize remediation activities to focus on the most critical exposures
- Streamline communication with key stakeholders using built-in reports and dashboards

### KEY USE CASES

- Attack path mapping
- Assessment of post-breach organizational exposure

---

## The SafeBreach Advantage

Not all exposure validation platforms are created equal. SafeBreach purpose-built its platform to serve security teams protecting large enterprises, with a specific focus on prioritizing safety, scalability and support.

### Enterprise-Grade Safety

The SafeBreach platform is purpose-built to meet the stringent safety and privacy requirements of mature enterprises, enabling comprehensive exposure validation without adversely impacting production environments.

### Predictable Scalability

Regardless of your environment or deployment model, the SafeBreach platform allows you to get started with a breadth and depth of testing that provides immediate value—then scale up when you're ready.

### World-Class Support

The SafeBreach platform is backed by a dedicated, award-winning customer success team that provides a level of service and support you won't find anywhere else.

### Industry-Recognized Original Research & Largest Attack Playbook

The **world-renowned SafeBreach threat researcher team feeds** our Hacker's Playbook, which provides more than 30,000 attack methods, the widest MITRE ATT&CK coverage, and updates within 24 hours of emerging threats.

## Get Hands-On with the SafeBreach Platform

**Schedule a personalized demo today to learn why enterprise security leaders choose SafeBreach Propagate to enhance the quality, efficacy, and value of their security programs.**

### ABOUT SAFEBREACH

SafeBreach is the leader in enterprise-grade exposure validation, providing the world's largest brands with safe and scalable capabilities to understand, measure and remediate threat exposure and associated cyber risk. The award-winning SafeBreach Exposure Validation Platform combines pioneering breach and attack simulation and innovative attack path validation capabilities to help enterprise security teams measure and address security gaps at the perimeter and beyond. Backed by a world-renowned original threat research team and world-class support, SafeBreach helps enterprises transform their security strategy from reactive to proactive safely and at scale. To learn more about how SafeBreach helps enterprises with end-to-end exposure visibility, visit [www.safebreach.com](http://www.safebreach.com).
